

Sticky Whitefly Traps

Instructions

Peel trap apart and fold together, yellow side out. Using enclosed twist-ties, hang trap from branch or stake at plant level.

For badly infested plants, shake gently after installing trap. Whiteflies will swarm a few moments, then head to your nearby trap. Aphids, thrips, leaf miners, gnats, fruit flies and leafhoppers are also attracted to the trap.

Your Sticky Whitefly Trap should last all season, even in rain. Recoat or replace when completely full with insects or dust.
